Sommario • Definizione Grid per OGSA -Funzionalità Esempio di Modellazione -Job EMS mediante DASM: Grid • Stati di un Job e Requisiti DASM DASM per Grid 2 1 DASM per Grid OGSA • OGSA = Open Grid Service Architecture • Definisce un insieme di specifiche che Grid secondo OGSA documentano i requisiti delle componenti hw/sw di una Grid

Definizione

- Per gli scopi del corso, una Grid è un insieme di unità computazionali indipendenti, distribuite e cooperanti, in grado di raggiungere uno specifico obiettivo computazionale all'interno di organizzazioni virtuali dinamiche e multiistituzionali (*)
 - -(*) I. Foster, C. Kesselman, and S. Tuecke, "The anatomy of the Grid: Enabling scalable virtual organizations", *Int. J. High Perform. Comput. Appl.*, vol. 15, n° 3, pp. 200-222, 2001

DASM per Grid

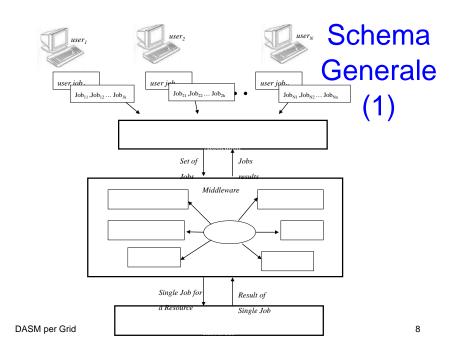

Funzionalità secondo OGSA

- OGSA identifica 6 principali funzionalità di una Grid:
 - -Execution Management Services (EMS);
 - -Data Services;
 - -Resource Management Services;
 - -Security Services;
 - -Self-Management Services;
 - -Information Services
- Per gli scopi del corso è particolarmente interessante EMS

6

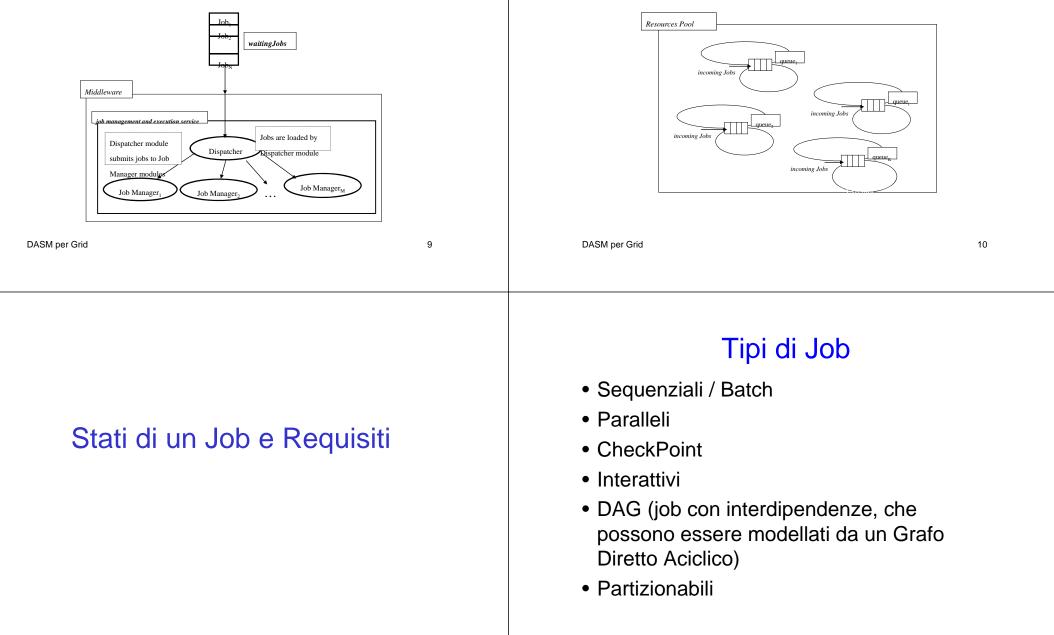

EMS secondo OGSA

- EMS address the job management and execution capability of a grid system and it is concerned with the research of candidate locations for
 - -execution
 - -preparation for execution
 - initiating and managing the execution of jobs until the end

Schema Generale (2)

DASM per Grid

DASM per Grid

Schema Generale (3)

Stati di un Job (1)

• SUBMITTED:

-the user has submitted the job via UI

• WAITING

-the WMS has received the job

• READY

 A CE, which matches job requirements, has been selected, and the job is transferred to the JSS

• SCHEDULED

-the JSS has sent the job to the CE $_{\mbox{\tiny DASM per Grid}}$

13

Stati di un Job (2)

RUNNING

-the job is running on the CE

- DONE this state has different meanings:
 - DONE (ok) : the execution has terminated on the CE (WN) with success
 - DONE (failure) : the execution has terminated on the CE (WN) with some problems
 - DONE (cancelled) : the job has been cancelled with success

DASM per Grid

14

Stati di un Job (3)

• OUTPUTREADY:

- -the output sandbox is ready to be retrieved by the user
- reflects the time difference between end of computation on CE and the moment WMS got necessary notification about job termination.

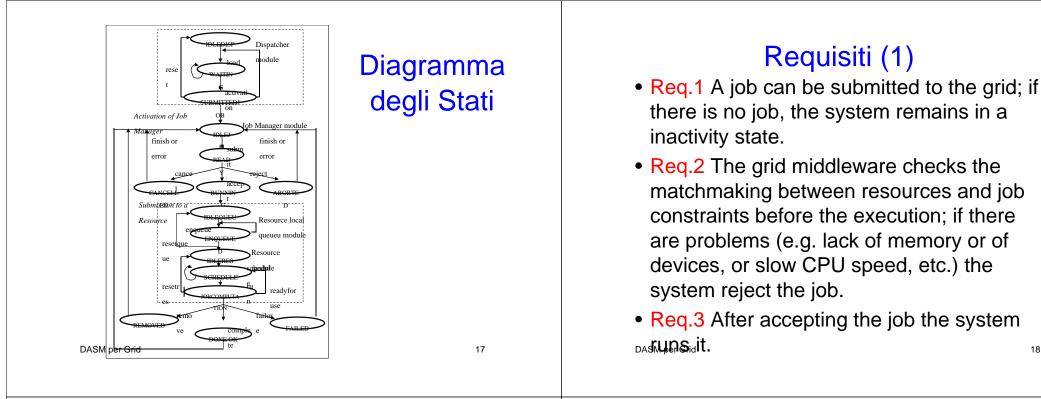

• CLEARED:

 the user has retrieved all output files successfully, and the job bookkeeping information is purged some time after the job enters in this state.

Stati di un Job (4)

• ABORTED:

- -the job has failed
- The job may fail for several reasons one of them is external to its execution (no resource found).

Requisiti (2)

- Reg.4 If there are no failures the job is completed; on the other case the job fails.
- Req.5 A user can cancel a job every time.
- Reg.6 At the end of the computation (job completed or aborted for every reason) every resource is released.
- Req.7 If software or hardware errors occur the job is aborted.
- Req.8 At the end of every computation the result is communicated to the end user.
