

JavaScript: Strutture di Controllo

JavaScript: Strutture di Controllo

1

Sommario

- Introduzione
- Algoritmi e Pseudocodice
- Strutture di Controllo
- if, if ...else
- while
- Assegnamento e Incremento / Decremento
- Tipizzazione
- Ciclo for
- Selezione multipla (switch)
- Ciclo do...while
- Istruzioni break e continue
- Operatori Logici
- Web Resources

JavaScript: Strutture di Controllo

2

Obiettivi

- Capire le tecniche di base di problem-solving
- Essere in grado di sviluppare algoritmi
- Essere in grado di usare i costrutti di base per la selezione e iterazione
- Essere in grado di usare gli operatori di incremento/decremento

JavaScript: Strutture di Controllo

3

Introduzione

- Per scrivere uno script è necessario
 - Capire **precisamente** il problema
 - Pianificare **dettagliatamente** l'approccio
 - Capire gli elementi di base disponibili
 - Applicare i principi di buona programmazione

JavaScript: Strutture di Controllo

4

Algoritmi

- Specificano le azioni che devono essere eseguite per giungere alla soluzione

Pseudocodice

- Artificiale
- Informale
- Aiuta il programmatore a sviluppare algoritmi

Strutture di Controllo (1)

- Esecuzione sequenziale
 - Le istruzioni sono eseguite nell'ordine con cui sono scritte, una dopo l'altra
- Trasferimento del controllo
 - Talvolta l'istruzione che deve essere eseguita potrebbe non essere quella immediatamente successiva

Strutture di Controllo (2)

- Tre strutture di controllo
 - Sequenza
 - Selezione
 - i f
 - i f...el se
 - swi tch
 - Ripetizione
 - whi l e
 - do...whi l e
 - for
 - for...i n

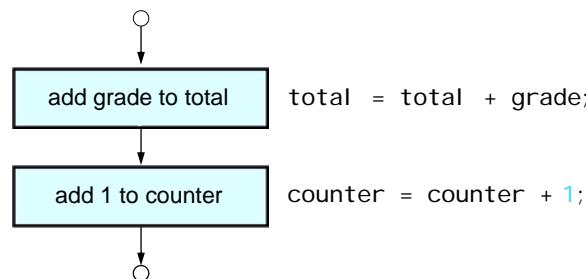

Strutture di Controllo (3)

- Flowchart
 - Rappresentazione grafica di (una parte di) un algoritmo
 - Linee di flusso (Flowlines)
 - Indicano l'ordine con cui sono eseguite le azioni specificate dall'algoritmo

Strutture di Controllo (4)

- Rettangolo
 - Indica un generico tipo di azione
- Ovale
 - Un algoritmo completo
- Cerchio
 - Una parte di un algoritmo
- Diamante
 - Indica un punto di decisione relativamente al valore di verità di una condizione

Strutture di Controllo (5)

Parole Riservate di JavaScript

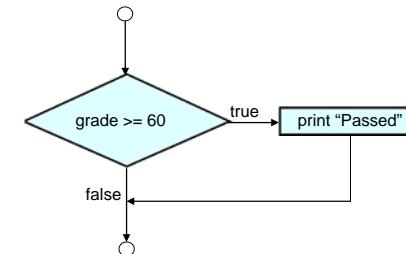

JavaScript Keywords				
break	case	catch	continue	default
delete	do	else	finally	for
function	if	in	instanceof	new
return	switch	this	throw	try
typeof	var	void	while	with
<i>Keywords that are reserved but not currently used by JavaScript</i>				
abstract	boolean	byte	char	class
const	debugger	double	enum	export
extends	final	float	goto	implements
import	int	interface	long	native
package	private	protected	public	short
static	super	synchronized	throws	transient
volatile				

Fig. 8.2 JavaScript keywords.

Selezione i f (1)

- Indica l'azione che deve essere eseguita solo quando la condizione è vera

Selezione i f (2)

Selezione i f...el se (1)

- Indica le diverse possibili azioni che devono essere eseguite quando la condizione è vera o quando è falsa
- Operatore Condizionale (?:)
 - È l'unico operatore ternario di JavaScript
 - Rappresenta un'espressione condizionale
 - Tre operandi
 - L'espressione booleana che deve essere valutata;
 - Il valore assunto dall'espressione condizionale nel caso in cui l'espressione sia vera;
 - Il valore assunto dall'espressione condizionale nel caso in cui l'espressione sia falsa

Selezione i f...el se (2)

- Dangling-else problem
 - L'interprete JavaScript associa ogni else all'if precedente più vicino
- Ad esempio:

```
i f (x>5)
  i f (y>5)
    document.wri tel n("si a x che y sono > 5")
  el se
    document.wri tel n ("x è <=5")
```

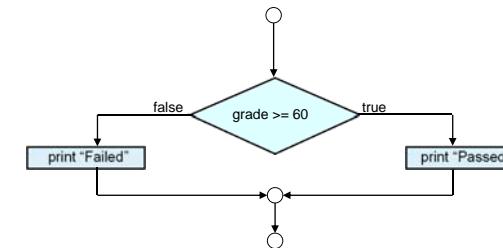

Se x = 6 e y = 3, l'output è
x è <=5

Selezione i f...el se (3)

- Per evitare il problema si usano i delimitatori di blocco { e }
- L'esempio corretto è

```
if (x>5)
{
    if (y>5)
        document.writeln("sia x che y sono > 5")
}
else
    document.writeln ("x è <=5")
```

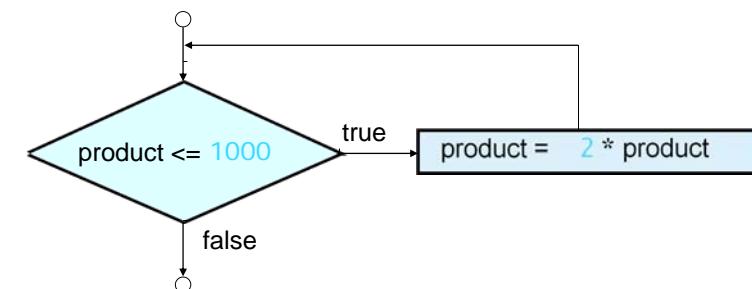

Selezione i f...el se (4)

Ripetizione whi l e (1)

- Struttura di ripetizione (loop)
 - Ripete l'azione fin tanto che la condizione è vera

Ripetizione whi l e (2)

```

Operatori di Assegnamento

Assignment operator	Initial value of variable	Sample expression	Explanation	Assigns
$+=$	$c = 3$	$c += 7$	$c = c + 7$	10 to c
$-=$	$d = 5$	$d -= 4$	$d = d - 4$	1 to d
$*=$	$e = 4$	$e *= 5$	$e = e * 5$	20 to e
$/=$	$f = 6$	$f /= 3$	$f = f / 3$	2 to f
$\%=$	$g = 12$	$g \%= 9$	$g = g \% 9$	3 to g

Fig. 8.12 Arithmetic assignment operators.

Operatori di Incremento e Decremento (1)

- Sono utilizzati per incrementare / decrementare il valore di una variabile che deve essere usato in un'espressione
 - Operatore di Preincremento / Predecremento:
 - l'operatore è posto prima della variabile
 - la variabile viene incrementata/decrementata e nell'espressione viene utilizzato il **nuovo valore**
 - Operatore di Postincremento / Postdecremento:
 - l'operatore è posto dopo la variabile
 - nell'espressione viene utilizzato il **vecchio valore** della variabile, e alla fine del calcolo dell'espressione, la variabile viene incrementata/decrementata

JavaScript: Strutture di Controllo

33

```
1 <?xml version = "1.0"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4

6 <!-- Preincrementing and Postincrementing -->
7
8 <html xmlns = "http://www.w3.org/1999/xhtml">
9   <head>
10    <title>Preincrementing and Postincrementing</title>
11
12   <script type = "text/javascript">
13     <!--
14       var c;
15
16       c = 5;
17       document.writeln( "<h3>Postincrementing</h3>" );
18       document.writeln( c );           // print 5
19       // print 5 then Increment
20       document.writeln( "<br />" + c++ );
21       document.writeln( "<br />" + c );  // print 6
22
23       c = 5;
24       document.writeln( "<h3>Preincrementing</h3>" );
25       document.writeln( c );           // print 5
```

Operatori di Incremento e Decremento (2)

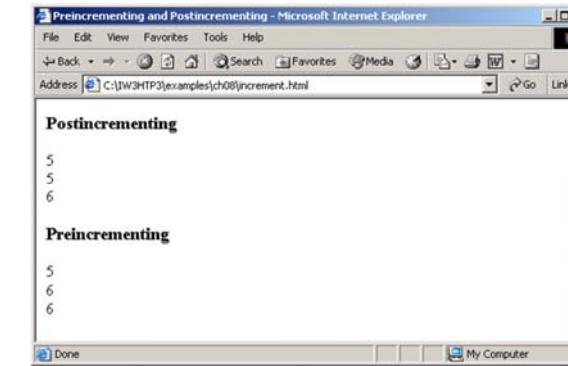

Operator	Called	Sample expression	Explanation
++	preincrement	++a	Increment a by 1, then use the new value of a in the expression in which a resides.
++	postincrement	a++	Use the current value of a in the expression in which a resides, then increment a by 1.
--	predecrement	--b	Decrement b by 1, then use the new value of b in the expression in which b resides.
--	postdecrement	b--	Use the current value of b in the expression in which b resides, then decrement b by 1.

Fig. 8.13 increment and decrement operators.

JavaScript: Strutture di Controllo

34

```
26      // Increment then print 6
27      document.writeln( "<br />" + ++c );
28      document.writeln( "<br />" + c );  // print 6
29      // -->
30      </script>
31

36

Operatori di Incremento e Decremento: Precedenza e Associatività

Operator	Associativity	Type
<code>++ --</code>	right to left	unary
<code>* / %</code>	left to right	multiplicative
<code>+ -</code>	left to right	additive
<code>< <= > >=</code>	left to right	relational
<code>== !=</code>	left to right	equality
<code>?:</code>	right to left	conditional
<code>= += -= *= /= %=</code>	right to left	assignment

Fig. 8.15 Precedence and associativity of the operators discussed so far.

Tipizzazione dei Dati

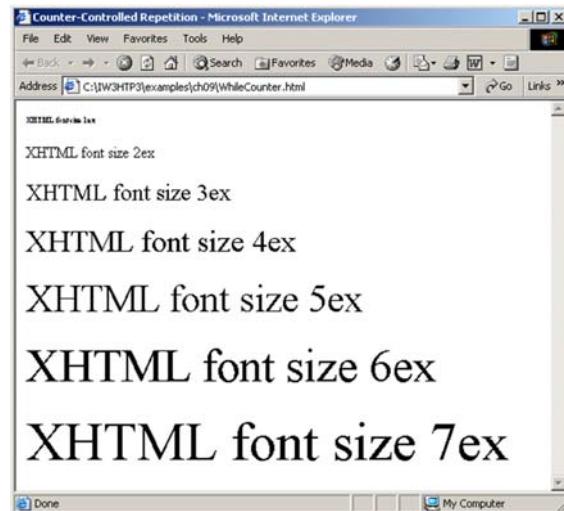

- JavaScript è debolmente tipizzato
 - Fornisce una conversione automatica di valori di tipi diversi

Ripetizione controllata da un contatore

- Nome del contatore di controllo
- Valore iniziale
- Incremento / decremento
- Valore finale

Ripetizione do...while : Flow Chart

break e continue

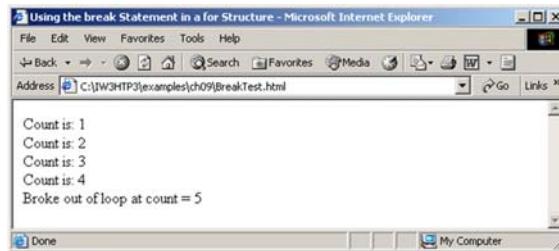

- **break**
 - Forza l'uscita immediata da una struttura
 - Salta ciò che rimane dell'istruzione switch
- **continue**
 - Salta ciò che rimane dell'istruzione switch
 - Continua con la successiva iterazione di un ciclo

```

Operatori Logici: Precedenze e Associatività

Operator	Associativity	Type
<code>++ -- !</code>	right to left	unary
<code>* / %</code>	left to right	multiplicative
<code>+ -</code>	left to right	additive
<code>< <= > >=</code>	left to right	relational
<code>== !=</code>	left to right	equality
<code>&&</code>	left to right	logical AND
<code> </code>	left to right	logical OR
<code>?:</code>	right to left	conditional
<code>= += -= *= /= %=</code>	right to left	assignment

Fig. 9.19 Precedence and associativity of the operators discussed so far.
