

# JavaScript: Strutture di Controllo

## Sommario

- Introduzione
- Algoritmi e Pseudocodice
- Strutture di Controllo
- if, if ...else
- while
- Assegnamento e Incremento / Decremento
- Tipizzazione
- Ciclo for
- Selezione multipla (switch)
- Ciclo do...while
- Istruzioni break e continue
- Operatori Logici
- Web Resources

## Obiettivi

- Capire le tecniche di base di problem-solving
- Essere in grado di sviluppare algoritmi
- Essere in grado di usare i costrutti di base per la selezione e iterazione
- Essere in grado di usare gli operatori di incremento/decremento

## Introduzione

- Per scrivere uno script è necessario
  - Capire **precisamente** il problema
  - Pianificare **dettagliatamente** l'approccio
  - Capire gli elementi di base disponibili
  - Applicare i principi di buona programmazione

## Algoritmi

- Specificano le azioni che devono essere eseguite per giungere alla soluzione

## Pseudocodice

- Artificiale
- Informale
- Aiuta il programmatore a sviluppare algoritmi

## Strutture di Controllo (1)

- Esecuzione sequenziale
  - Le istruzioni sono eseguite nell'ordine con cui sono scritte, una dopo l'altra
- Trasferimento del controllo
  - Talvolta l'istruzione che deve essere eseguita potrebbe non essere quella immediatamente successiva

## Strutture di Controllo (2)

- Tre strutture di controllo
  - Sequenza
  - Selezione
    - i f
    - i f...e l se
    - swi tch
  - Ripetizione
    - whi l e
    - do...whi l e
    - for
    - for...i n

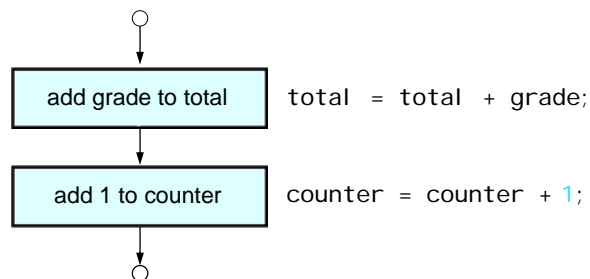

## Strutture di Controllo (3)

- Flowchart
  - Rappresentazione grafica di (una parte di) un algoritmo
  - Linee di flusso (Flowlines)
    - Indicano l'ordine con cui sono eseguite le azioni specificate dall'algoritmo

## Strutture di Controllo (4)

- Rettangolo
  - Indica un generico tipo di azione
- Ovale
  - Un algoritmo completo
- Cerchio
  - Una parte di un algoritmo
- Diamante
  - Indica un punto di decisione relativamente al valore di verità di una condizione

## Strutture di Controllo (5)

## Parole Riservate di JavaScript

JavaScript Keywords				
break	case	catch	continue	default
delete	do	else	finally	for
function	if	in	instanceof	new
return	switch	this	throw	try
typeof	var	void	while	with
<i>Keywords that are reserved but not currently used by JavaScript</i>				
abstract	boolean	byte	char	class
const	debugger	double	enum	export
extends	final	float	goto	implements
import	int	interface	long	native
package	private	protected	public	short
static	super	synchronized	throws	transient
volatile				

Fig. 8.2 JavaScript keywords.

## Selezione i f (1)

- Indica l'azione che deve essere eseguita solo quando la condizione è vera

## Selezione i f (2)

## Selezione i f...el se (1)

- Indica le diverse possibili azioni che devono essere eseguite quando la condizione è vera o quando è falsa
- Operatore Condizionale (?: )
  - È l'unico operatore ternario di JavaScript
  - Rappresenta un'espressione condizionale
  - Tre operandi
    - L'espressione booleana che deve essere valutata;
    - Il valore assunto dall'espressione condizionale nel caso in cui l'espressione sia vera;
    - Il valore assunto dall'espressione condizionale nel caso in cui l'espressione sia falsa

## Selezione i f...el se (2)

- Dangling-else problem
  - L'interprete JavaScript associa ogni else all'if precedente più vicino

- Ad esempio:

```
if (x>5)
  if (y>5)
    document.writeln("sia x che y sono > 5")
  else
    document.writeln("x è <=5")
```

**Se x = 6 e y = 3, l'output è**

x è <=5

## Selezione i f...el se (3)

- Per evitare il problema si usano i delimitatori di blocco { e }
  - L'esempio corretto è
- ```
if (x>5)
{
  if (y>5)
    document.writeln("sia x che y sono > 5)
}
else
  document.writeln ("x è <=5")
```

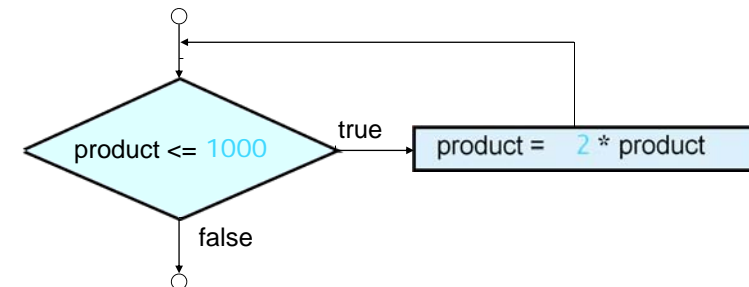

## Selezione i f...el se (4)

## Ripetizione while (1)

- Struttura di ripetizione (loop)
  - Ripete l'azione fin tanto che la condizione è vera

## Ripetizione while (2)

```

## Operatori di Assegnamento

| Assignment operator | Initial value of variable | Sample expression | Explanation | Assigns |
|---------------------|---------------------------|-------------------|-------------|---------|
| +=                  | c = 3                     | c += 7            | c = c + 7   | 10 to c |
| -=                  | d = 5                     | d -= 4            | d = d - 4   | 1 to d  |
| *=                  | e = 4                     | e *= 5            | e = e * 5   | 20 to e |
| /=                  | f = 6                     | f /= 3            | f = f / 3   | 2 to f  |
| %=                  | g = 12                    | g %= 9            | g = g % 9   | 3 to g  |

Fig. 8.12 Arithmetic assignment operators.

# Operatori di Incremento e Decremento (1)

- Sono utilizzati per incrementare / decrementare il valore di una variabile che deve essere usato in un'espressione
  - Operatore di Preincremento / Predecremento:
    - l'operatore è posto prima della variabile
    - la variabile viene incrementata/decrementata e nell'espressione viene utilizzato il **nuovo valore**
  - Operatore di Postincremento / Postdecremento:
    - l'operatore è posto dopo la variabile
    - nell'espressione viene utilizzato il **vecchio valore** della variabile, e alla fine del calcolo dell'espressione, la variabile viene incrementata/decrementata

# Operatori di Incremento e Decremento (2)

| Operator | Called        | Sample expression | Explanation                                                                             |
|----------|---------------|-------------------|-----------------------------------------------------------------------------------------|
| ++       | preincrement  | ++a               | Increment a by 1, then use the new value of a in the expression in which a resides.     |
| ++       | postincrement | a++               | Use the current value of a in the expression in which a resides, then increment a by 1. |
| --       | predecrement  | --b               | Decrement b by 1, then use the new value of b in the expression in which b resides.     |
| --       | postdecrement | b--               | Use the current value of b in the expression in which b resides, then decrement b by 1. |

```

## Operatori di Incremento e Decremento: Precedenza e Associatività

| Operator         | Associativity | Type           |
|------------------|---------------|----------------|
| ++ --            | right to left | unary          |
| * / %            | left to right | multiplicative |
| + -              | left to right | additive       |
| < <= > >=        | left to right | relational     |
| == !=            | left to right | equality       |
| ?:               | right to left | conditional    |
| = += -= *= /= %= | right to left | assignment     |

Fig. 8.15 Precedence and associativity of the operators discussed so far.

## Tipizzazione dei Dati

- JavaScript è debolmente tipizzato
  - Fornisce una conversione automatica di valori di tipi diversi

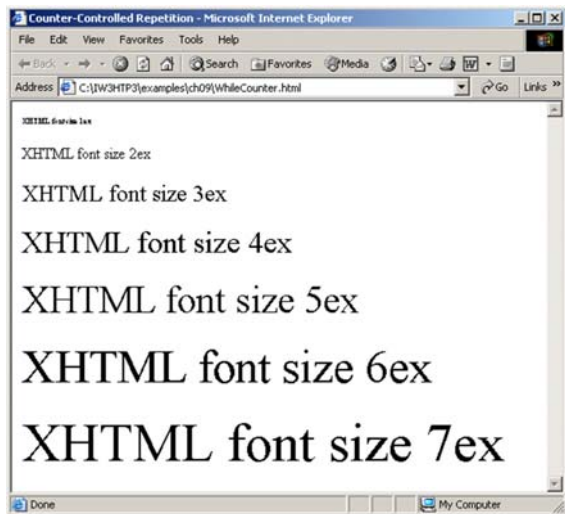

## Ripetizione controllata da un contatore

- Nome del contatore di controllo
- Valore iniziale
- Incremento / decremento
- Valore finale

```

1 <?xml version = "1.0"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 9.1: WhileCounter.html -->
6 <!-- Counter-Controlled Repetition -->
7
8 <html xmlns = "http://www.w3.org/1999/xhtml">
9   <head>
10    <title>Counter-Controlled Repetition</title>
11
12    <script type = "text/javascript">
13      <!--
14      var counter = 1; // Initialization
15
16      while ( counter <= 7 ) { // repetition condition
17        document.writeln( "<p style = \"font-size: \" +
18          counter + \"ex\\>XHTML font size \" + counter +
19          \"ex</p>\" );
20        ++counter; // Increment
21      }
22      // -->
23    </script>
24

```

## Ripetizione for (1)

- Gestisce i dettagli della ripetizione controllata da contatore

## Ripetizione for (2)

Fig. 9.3 For statement header components.

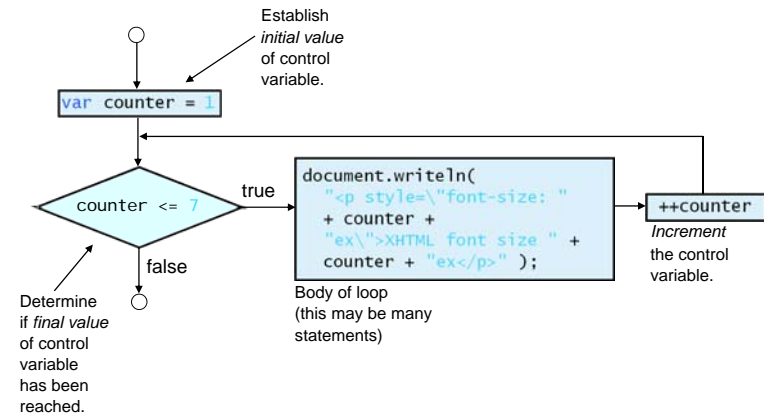

```

1 <?xml version = "1.0"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 9.2: ForCounter.html -->
6 <!-- Counter-Controlled Repetition with for statement -->
7
8 <html xmlns = "http://www.w3.org/1999/xhtml">
9   <head>
10    <title>Counter-Controlled Repetition</title>
11
12    <script type = "text/javascript">
13      <!--
14       // Initialization, repetition condition and
15       // incrementing are all included in the for
16       // statement header.
17      for ( var counter = 1; counter <= 7; ++counter )
18        document.writeln( "<p style = \"font-size: \" +
19          counter + \"ex\">XHTML font size \" + counter +
20          \"ex</p>\" );
21      // -->
22    </script>
23
24   </head><body></body>
25 </html >

```

## Ripetizione for: Flow Chart

## Ripetizione for: Esempio

- Esempio: somma
  - Oggetto Math
    - Metodo pow
    - Metodo round

```

1 <?xml version = "1.0"?>

53 // -->
54 </script>
55
56 </head>
57 <body>
58 <p>Click Refresh (or Reload) to run the script again</p>
59 </body>
60 </html >

```

## Selezione Multipla switch : Flow Chart

## Ripetizione do...while

- Analoga alla while
- La condizione viene verificata dopo l'esecuzione del corpo del ciclo
- Il corpo del ciclo è sempre eseguito almeno una volta

```

1 <?xml version = "1.0"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"

## Ripetizione do...whi l e : Flow Chart

## break e conti nue

- break
  - Forza l'uscita immediata da una struttura
  - Salta ciò che rimane dell'istruzione swi tch
- conti nue
  - Salta ciò che rimane dell'istruzione swi tch
  - Continua con la successiva iterazione di un ciclo

```

## Operatori Logici (1)

- AND Logico ( && )
- OR Logico ( || )
- NOT Logico ( ! )

## Operatori Logici (2)

| expression1 | expression2 | expression1 && expression2 |
|-------------|-------------|----------------------------|
| false       | false       | false                      |
| false       | true        | false                      |
| true        | false       | false                      |
| true        | true        | true                       |

Fig. 9.15 Truth table for the && (logical AND) operator.

## Operatori Logici (3)

| expression1 | expression2 | expression1    expression2 |
|-------------|-------------|----------------------------|
| false       | false       | false                      |
| false       | true        | true                       |
| true        | false       | true                       |
| true        | true        | true                       |

Fig. 9.16 Truth table for the || (logical OR) operator.

| expression | ! expression |
|------------|--------------|
| false      | true         |
| true       | false        |

## Operatori Logici: Precedenze e Associatività

| Operator         | Associativity | Type           |
|------------------|---------------|----------------|
| ++ -- !          | right to left | unary          |
| * / %            | left to right | multiplicative |
| + -              | left to right | additive       |
| < <= > >=        | left to right | relational     |
| == !=            | left to right | equality       |
| &&               | left to right | logical AND    |
|                  | left to right | logical OR     |
| ?:               | right to left | conditional    |
| = += -= *= /= %= | right to left | assignment     |

Fig. 9.19 Precedence and associativity of the operators discussed so far.
