

Capitolo 6 - Array

1

Outline

Array

Definizione degli Array

Esempi con Array

Array come parametri a funzioni

Sorting Arrays

Esercizi: Calcolo della Media, Mediana e Moda usando Array

Array Multidimensionali

© Copyright 1992–2004 by Deitel & Associates, Inc. and Pearson Education Inc. All Rights Reserved.

Array

- Gli elementi di un array sono gestiti come normali variabili

```
c[ 0 ] = 3;  
printf( "%d", c[ 0 ] );
```

- Operazioni eseguite con un indice.

- Es. Se x è 3 allora la seguente è corretta
 $c[5 - 2] == c[3] == c[x]$

© Copyright 1992–2004 by Deitel & Associates, Inc. and Pearson Education Inc. All Rights Reserved.

Array

Nome dell'array (Tutti gli elementi di questo array hanno lo stesso nome, c)

2

- Array

- Gruppo di locazioni di memoria consecutive
- Stesso nome e tipo

c[0]	-45
c[1]	6
c[2]	0
c[3]	72
c[4]	1543
c[5]	-89
c[6]	0
c[7]	62
c[8]	-3
c[9]	1
c[10]	6453
c[11]	78

- Per riferirsi a un elemento, specificare

- Nome dell'array
- Posizione

- Formato:

arrayname[position number]

- Primo elemento a posizione 0
- array di n elementi di nome c:
 - $c[0], c[1] \dots c[n - 1]$

Numero di posizioni
del l'elemento
nel l'array c

3

4

Array

Operatori					Associatività	Tipo
[]	()				left to right	highest
++	--	!	(type)		right to left	unary
*	/	%			left to right	multiplicative
+	-				left to right	additive
<	<=	>	>=		left to right	relational
==	!=				left to right	equality
&&					left to right	logical and
					left to right	logical or
?:					right to left	conditional
=	+=	-=	*=	/=	right to left	assignment
,					left to right	comma

Fig. 6.2 Operator precedence.

Definizione degli Array

- Nella definizione degli array, specificare
 - Tipo dell'array
 - Nome
 - Numero di elementi

```
arrayType arrayName[ numberOfTypeElements ];
```
- Esempi:

```
int c[ 10 ];
float myArray[ 3284 ];
```
- Definizione di array multipli dello stesso tipo
 - Formato simile alle variabili regolari
 - Esempio:

```
int b[ 100 ], x[ 27 ];
```

© Copyright 1992–2004 by Deitel & Associates, Inc. and Pearson Education Inc. All Rights Reserved.

```

1 /* Fig. 6.3: fig06_03.c
2  Initializing an array
3 #include <stdio.h>
4
5 /* function main begins program execution */
6 int main()
7 {
8     int n[ 10 ]; /* n is an array of 10 integers */
9     int i;        /* counter */
10
11    /* Initialize elements of array n to 0 */
12    for ( i = 0; i < 10; i++ ) {
13        n[ i ] = 0; /* set element at location i to 0 */
14    } /* end for */
15
16    printf( "%s%13s\n", "Element", "Value" );
17
18    /* output contents of array n in tabular format */
19    for ( i = 0; i < 10; i++ ) {
20        printf( "%7d%13d\n", i, n[ i ] );
21    } /* end for */
22
23    return 0; /* indicates successful termination */
24
25 } /* end main */
```

Esempi con Array

- Inizializzazione

```
int n[ 5 ] = { 1, 2, 3, 4, 5 };
```

 - Se non ci sono sufficienti valori di inizializzazione, gli elementi più a destra diventano 0

```
int n[ 5 ] = { 1 }
```

 - Tutti gli elementi hanno il valore 0, ad eccezione del primo che vale 1
 - Se ci sono troppi valori di inizializzazione, viene prodotto un errore sintattico
 - Gli array in C non hanno il controllo dei limiti
- Se la dimensione è omessa, gli inizializzatori la determinano

```
int n[ ] = { 1, 2, 3, 4, 5 };
```

© Copyright 1992–2004 by Deitel & Associates, Inc. and Pearson Education Inc. All Rights Reserved.

© Copyright 1992–2004 by Deitel & Associates, Inc. and Pearson Education Inc. All Rights Reserved.

Esempi con Array

- Array di caratteri

- La stringa "first" è un array statico di caratteri
- Gli arrays di caratteri possono essere inizializzati usando stringhe di letterali

```
char string1[] = "first";
      • Il carattere Null '\0' termina le stringhe
      • string1 ha 6 elementi
          - E' equivalente a
      char string1[] = { 'f', 'i', 'r', 's', 't', '\0' };
      – E' possibile accedere ai caratteri individuali
          string1[3] è il carattere 's'
      – Il nome dell'array è l'indirizzo dell'array, dunque & non è richiesto nella scanf
      scanf( "%s", string2 );
      • Legge i caratteri fino a quando non si incontra uno spazio bianco
      • Attenzione: si può scrivere anche oltre i limiti di un array
```

Second call to each function:

Values on entering staticArrayInit:
array1[0] = 5 array1[1] = 5 array1[2] = 5
Values on exiting staticArrayInit:
array1[0] = 10 array1[1] = 10 array1[2] = 10

Values on entering automaticArrayInit:
array2[0] = 1 array2[1] = 2 array2[2] = 3
Values on exiting automaticArrayInit:
array2[0] = 6 array2[1] = 7 array2[2] = 8

Outline

Program Output

26

27

Array come parametri a funzioni

- Passaggio di array

- Per passare un array come argomento a una funzione, specificare il nome dell'array senza parentesi quadre

```

int myArray[ 24 ];
myFunction( myArray, 24 );

```

- La dimensione dell'array è in genere passata come ulteriore parametro

- Gli array sono passati per riferimento
- Il nome dell'array è l'indirizzo del suo primo elemento
- La funzione conosce dove l'array è memorizzato
- Vengono modificate le posizioni originali in memoria

- Passaggio di elementi singoli dell'array

- Passaggio per valore
- Passare il nome con l'indice (i.e., myArray[3]) alla funzione

28

Array come parametri a funzioni

- Prototipo di funzione

```
void modifyArray( int b[], int arraySize );
```

- I nomi dei parametri sono opzionali nel prototipo
- `int b[]` potrebbe essere scritto `int []`
- `int arraySize` potrebbe essere semplicemente `int`

```

1 /* Fig. 6.12: fig06_12.c
2   The name of an array is the same as &array[ 0 ] */
3 #include <stdio.h>
4
5 /* function main begins program execution */
6 Int main()
7 {
8   char array[ 5 ]; /* define an array of size 5 */
9
10  printf( "    array = %p\n&array[ 0 ] = %p\n"
11        "    array = %p\n",
12        array, &array[ 0 ], &array );
13
14  return 0; /* indicates successful termination */
15
16 } /* end main */
17
18 array = 0012FF78
19 &array[ 0 ] = 0012FF78
20 &array = 0012FF78

Effects of passing entire array by reference:

The values of the original array are:

0 1 2 3 4

The values of the modified array are:

0 2 4 6 8

Effects of passing array element by value:

The value of a[3] is 6

Value in modifyElement is 12

The value of a[3] is 6

Mean

The mean is the average value of the data items. The mean is equal to the total of all the data items divided by the number of data items (99). The mean value for this run is: $681 / 99 = 6.8788$

Median

The unsorted array of responses is
6 7 8 9 8 7 8 9 8 9 7 8 9 5 9 8 7 8 7 8
6 7 8 9 3 9 8 7 8 7 7 8 9 8 9 8 9 7 8 9
6 7 8 7 8 7 9 8 9 2 7 8 9 8 9 8 9 7 5 3
5 6 7 2 5 3 9 4 6 4 7 8 9 6 8 7 8 9 7 8
7 4 4 2 5 3 8 7 5 6 4 5 6 1 6 5 7 8 7

The sorted array is
1 2 2 2 3 3 3 3 4 4 4 4 4 4 5 5 5 5 5 5
5 6 6 6 6 6 6 6 6 7 7 7 7 7 7 7 7 7 7 7
7 7 7 7 7 7 7 7 7 7 7 8 8 8 8 8 8 8 8 8
8
9 9

45

The median is element 49 of the sorted 99 element array.
For this run the median is 7

Mode

Response	Frequency	Histogram
5	0	5
6	5	0
7	23	*****
8	27	*****
9	19	*****

The mode is the most frequent value.
For this run the mode is 8 which occurred 27 times.

47 Array Multidimensionali

- Array multidimensionali
 - Tabelle con righe e colonne ($m \times n$ array)
 - Come le matrici: specificare le righe, poi le colonne

47

48 Array Multidimensionali

- Inizializzazione
 - `int b[2][2] = { { 1, 2 }, { 3, 4 } };`
 - Inizializzatori raggruppati per righe tra parentesi graffe
 - Se non sufficienti, gli elementi non specificati sono settati a zero

```
int b[ 2 ][ 2 ] = { { 1 }, { 3, 4 } };
```

1	2
3	4

- Referenziazione degli elementi

- Specificare la riga, poi la colonna

```
printf( "%d", b[ 0 ][ 1 ] );
```

129
130 } /* end function printArray */

```

The array is:

	[0]	[1]	[2]	[3]
studentGrades[0]	77	68	86	73
studentGrades[1]	96	87	89	78
studentGrades[2]	70	90	86	81

Lowest grade: 68

Highest grade: 96

The average grade for student 0 is 76.00

The average grade for student 1 is 87.50

The average grade for student 2 is 81.75
